

METHOD

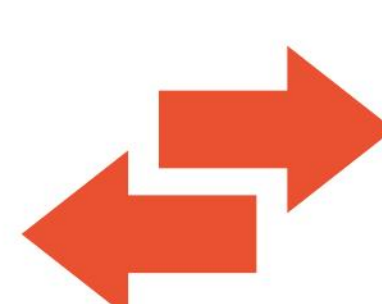

The model promotes the assessment of the economic and social impact of social enterprises by identifying the qualitative and quantitative effects - in the short, medium and long term - that their activities generate for different stakeholders and the local community.

INDICATORS

STRUCTURE AND RESOURCES

GOVERNANCE AND PROCESSES

OUTCOMES AND IMPACT

STAKEHOLDER QUESTIONNAIRES

INTERVIEWS WITH INSTITUTIONAL REPRESENTATIVES

SELF-COMPLETION QUESTIONNAIRE FOR THE ORGANISATION

TOOLS

ImpACT Report

AGGREGATE REPORT

Assesses the economic and social impact of consortia or federations of cooperatives, identifying their relevance to the local area and best practices, and informing local planning.

INDIVIDUAL REPORT

Enables cooperatives to communicate and report their activities and social impact to internal and external stakeholders. Comparison with aggregate results helps identify limitations and plan future policies.

QUANTITATIVE AND QUALITATIVE DATA

Integration of data sources, internal assessments and stakeholder feedback, with results on the efficiency and effectiveness of action.

CHARTS AND SUMMARY INDICATORS

Data shown in easy-to-read charts; aggregate statistics enable immediate communication of results, while clusters and models identify strengths and weaknesses.

BENEFITS

VIRTUOUS

Triggers learning and improvement, supports self-assessment and strategy development, and serves as a training tool.

PARTICIPATORY

Requires the progressive involvement of stakeholders, engaging them in data collection and impact assessment.

UNIVERSAL

Consistent with international guidelines and aligned with the definition of social impact in Italian Law 106/2016; enables comparison with the wider system.

FOR EVERYONE

Suitable for organisations of every size: small, medium and large; feasible, appropriate, useful and flexible.

VALIDATED

Built on scientific methods; its application is supervised by researchers, and aggregate and individual reports are based on Euricse research and validation.

FOR WHOM

Different stakeholders have different assessment needs and different views on which impact indicators and dimensions should be reported. The method gathers heterogeneous data, presents the many facets of impact, and creates synergies between social reporting and social impact assessment.
